AI CAPSTONE PROJECT

AI Brand Identity Starter Kit

CAPSTONE 18

AI-powered brand identity for a student startup

PROJECT REPORT

1. Project Overview

Project question: How far can AI go in creating a consistent brand identity for a new student startup?

Startup idea: StudyNest is a student-focused study planner that helps learners organise tasks, set revision goals, and build productive study habits. The brand is designed to feel friendly, clear, affordable, and trustworthy.

Objective: Use AI tools for brainstorming and visual exploration, then apply human judgement to select and refine a suitable brand identity. The final output includes a name shortlist, logo directions, brand guidelines, sample promotional designs, a prompt library, verification notes, and an ethical-use review.

Important note

This report is a ready-to-edit project draft. The concepts and sample analysis below are proposed project work, not proof that external tools were actually used or that legal searches were completed. Before submitting, run the checks yourself, save screenshots, and update the verification report with your real results.

2. Startup Mission and Audience

Brand name: StudyNest

Mission: To make daily study planning simple and less stressful for students through an easy-to-use digital planner.

Vision: To help students build consistent study habits and feel more confident about their learning goals.

Target audience: College students and senior-school students aged approximately 16–24 who need help organising assignments, revision, and exam preparation.

Audience needs: Simple planning, reminders, clear progress tracking, low cost, mobile-friendly use, and an encouraging tone.

Brand personality: Friendly, organised, optimistic, calm, and practical.

3. Brand Name Brainstorming

The following 20 names are brainstorming options and have not been confirmed as legally available. Check search engines, app stores, domain registrars, and relevant trademark databases before public use.

No.	Proposed name	Reason / impression
1	StudyNest	A supportive place to organise study
2	FocusLeaf	Growth through concentration
3	StudySpark	Energy and motivation
4	LearnLoop	A repeating learning routine
5	BrightTrack	Visible progress
6	TaskBloom	Tasks turning into achievement
7	MindHarbor	A calm place to plan
8	RevisionMate	A helpful study companion
9	NotePilot	Guidance for notes and tasks
10	GoalGrid	Structured goals

No.	Proposed name	Reason / impression
11	StudySprout	Small habits growing over time
12	FocusBridge	Connecting plans to results
13	LearnLoom	Bringing learning tasks together
14	PrepPocket	Study support on mobile
15	ClearChapter	Clarity and progress
16	DailyDocket	Everyday task organisation
17	StudyOrbit	Keeping study activities in order
18	BrightNest	A positive learning space
19	ExamEase	Reducing exam-planning stress
20	PlanPebble	Small, manageable steps

Selected name: StudyNest

StudyNest was selected because it is easy to say, gives a sense of safety and support, and fits a study-planning product. The word “Nest” suggests a comfortable place, while “Study” explains the product category. This is a creative preference only; name availability must still be verified.

4. Logo Concepts

These are five visual directions to create in a design tool; insert your actual generated logo images in the final submission.

Concept	Visual direction	Strength	Possible concern
A. Open Book Nest	An open book shaped like a small nest, with a simple leaf or page detail.	Connects study with comfort and growth.	Too many details may not scale down well.
B. S + Checkmark	A clean letter S combined with a small checkmark.	Simple, modern, and suitable for an app icon.	May look generic without a distinctive shape.
C. Nesting Pages	Three rounded page shapes forming a nest or circular symbol.	Communicates organisation and continuity.	The symbol may need explanation.
D. Focus Window	A rounded square frame with a small book in the centre.	Works well for mobile interfaces.	Could resemble other productivity apps.
E. Growing Knowledge	A minimal sprout emerging from an open book.	Suggests learning and progress.	Leaf-and-book imagery is commonly used.

Chosen direction: A. Open Book Nest

The open-book and nest idea best communicates the purpose of StudyNest. The final logo should use simple geometry, avoid tiny details, and remain readable in a small app icon. Compare it with existing logos before using it publicly.

Suggested logo prompt

“Create five distinct logo concept directions for a student study-planning startup named StudyNest. Explore a minimal open-book and nest symbol, rounded geometric shapes, friendly and modern styling, and a clean flat-vector look. Use teal and navy with a small warm accent. Keep the symbol simple and legible at app-icon size. Avoid mockups, gradients, copied brand marks, and unnecessary tiny details. Present each concept separately on a plain background.”

5. Brand Guideline Page

Colour	Suggested value	Purpose
Deep Navy	#17365D	Trust, clarity, headings
Study Teal	#168C8C	Freshness, learning, action
Soft Blue	#EAF2F8	Calm backgrounds
Warm Accent	#F4B183	Small highlights and buttons

Typography: Use a clean sans-serif font such as Poppins, Inter, or Arial. Use bold weights for headings and regular weights for body text. Keep body text readable and avoid using more than two font families.

Logo usage: Keep clear space around the logo; do not stretch it, rotate it, add unapproved effects, or place it on a busy background. Use a one-colour version when needed.

Brand voice: Friendly, encouraging, direct, and practical. Use short sentences and action-oriented language. Avoid shaming students or promising guaranteed grades.

Tagline: “Plan Better. Learn Brighter.”

6. Sample Business Card and Social Banner

Recreate these layouts in Canva and add your selected logo artwork.

StudyNest
Plan Better. Learn Brighter.

A calmer way to plan your study day.

Social media banner — layout

STUDYNEST
Plan Better. Learn Brighter.

Organise your tasks. Build better study habits.

Start with one small step →

Design note: Use navy for the main heading, teal for the call-to-action, and generous empty space. Replace the example contact details before real use.

7. AI Tools and Workflow

Use at least four free-tier tools, depending on their current plan limits and availability. Record the actual tool, date, and output used.

Tool	Planned use	Human review
ChatGPT	Generate name ideas, tagline options, brand voice, and prompt drafts.	Remove duplicates, check tone, and verify claims.
Leonardo AI	Explore visual logo directions and symbol styles.	Reject confusing or overly detailed outputs.
Ideogram	Generate additional logo/post visual concepts.	Check spelling, originality, and text accuracy.
Canva	Arrange final brand guideline, business card, and banner.	Check alignment, contrast, readability, and export quality.
Google Search / trademark databases	Research similar names and visible brand use.	Record search terms, dates, and results.

Workflow

- 1. Define the startup purpose, audience, mission, and personality.
- 2. Ask an AI assistant for 20 name ideas and group similar names.
- 3. Manually search for similar names and remove obvious conflicts.
- 4. Write a clear visual prompt and generate five logo directions.
- 5. Compare concepts using readability, relevance, simplicity, and distinctiveness.
- 6. Refine the selected direction in a design editor.
- 7. Apply the approved palette, fonts, tagline, and brand voice to a guideline page.
- 8. Create a matching business card and social media banner.
- 9. Check spelling, colour contrast, layout, originality risks, and factual claims.
- 10. Save prompts, screenshots, final exports, and a short reflection.

8. Prompt Library

Task	Prompt to use
Brand strategy	“Act as a brand strategist. For a student study-planning startup called StudyNest, define its mission, audience, pain points, brand personality, and three key messages. Keep claims realistic and student-friendly.”
Name brainstorming	“Generate 20 short, memorable names for a student study planner. Give each name a one-line reason. Do not claim that any name is available or legally safe.”
Tagline	“Suggest 10 short taglines for StudyNest. The tone should be friendly, encouraging, and practical. Avoid guaranteed academic results.”
Logo concepts	“Create five distinct logo directions for StudyNest using an open-book/nest idea. Use simple flat shapes, navy and teal, and ensure legibility at small sizes. Do not imitate existing brands.”
Brand guidelines	“Create a one-page brand guideline for StudyNest using navy #17365D, teal #168C8C, soft blue #EAF2F8, and warm accent #F4B183. Include fonts, logo rules, voice, and tagline.”

Task	Prompt to use
Verification	“Review this draft brand copy for spelling, unsupported claims, privacy issues, and statements that require verification. Return a checklist and do not invent sources.”

9. Verification Report

AI outputs can contain errors, generic ideas, inaccurate information, or visual defects. Complete this checklist after checking actual outputs.

Check	How to verify	Status to record
Name similarity	Search each name in search engines, app stores, and social platforms.	Pending actual search
Trademark risk	Search relevant official trademark databases in the intended country and category.	Pending actual search
Domain / handle	Check domain registrars and social usernames.	Pending actual search
Spelling and text	Read every word in the logo, banner, and business card.	Check final exports
Visual quality	Test logo on light/dark backgrounds and at small sizes.	Check final exports
Accessibility	Review contrast and text size.	Check final designs
AI factual claims	Remove unsupported promises.	Reviewed in draft
Privacy	Do not upload private student information into prompts.	Follow during use

Verification outcome

At draft stage, StudyNest is a proposed name and the logo directions are concept descriptions. No claim is made that the name is available, a trademark search has passed, or a generated logo is legally safe. Include dated screenshots or notes from checks actually performed.

10. Copyright, Trademark, and Ethical Risks

Copyright: AI visuals may resemble existing artwork or have unclear ownership or usage terms. Review the tool’s current terms and do not assume outputs are exclusive or automatically protected.

Trademark: A name or logo may conflict with an existing mark even if a quick search finds no exact match. Similar spelling, pronunciation, appearance, and related services may matter. A manual check is not legal advice.

Honest AI disclosure: Disclose AI contributions when required by the course, platform, or client.

Privacy: Do not place personal details, student records, passwords, or private contact information into prompts. Use sample details for mockups.

Bias and accuracy: Review content to avoid stereotypes, unrealistic promises, and invented facts.

Human responsibility: The student remains responsible for reviewing the final brand and following applicable rules.

11. Before-and-After Analysis

Area	Before using AI	After AI-assisted drafting and human review
Idea development	The startup idea may be broad.	Mission, audience, and personality are structured.
Naming	Only one or two names may be considered.	20 candidates are available for comparison.
Visual design	The first idea may be difficult to imagine.	Five directions can be compared before refinement.
Consistency	Colours and wording may vary.	A shared palette and voice guide improve consistency.
Quality control	Errors or conflicts may be missed.	A checklist highlights spelling, privacy, and legal-risk checks.

Reflection: AI can speed up brainstorming and help explore directions. However, suggestions may be generic or inaccurate, and visual outputs may resemble existing designs. Human review and real verification remain essential.

12. Final Demo Plan

Time	What to show
30 seconds	Introduce StudyNest, mission, and target audience.
45 seconds	Show the name shortlist and explain why StudyNest was selected.
60 seconds	Show five logo concepts and explain the chosen direction.
60 seconds	Present brand guideline, business card, and banner.
45 seconds	Explain workflow and AI tools used.
45 seconds	Show verification notes, copyright risks, and ethical safeguards.

13. Conclusion

This project demonstrates how AI can support the early stages of building a brand identity for a student startup. For StudyNest, AI-assisted brainstorming helps organise name ideas, explore logo directions, and prepare consistent brand copy. A defined palette, typography, tagline, and voice help the business card and social banner look connected.

AI also has limits. Generated ideas may be repetitive, text may contain errors, and visuals may resemble existing designs. The best result combines AI assistance with human judgement, manual verification, privacy awareness, and honest disclosure.

14. Final Submission Checklist

- ■ Add actual five logo concept images.
- ■ Create and insert the final brand guideline page.
- ■ Create and insert the finished business card and social media banner.
- ■ Perform actual name, domain, social handle, and trademark checks; record dates and results.
- ■ Add screenshots of AI tools used and keep prompts and outputs.

- ■ Update the verification report to reflect checks actually completed.
- ■ Add before/after images if available and explain changes.
- ■ Review spelling, page layout, and course requirements before submission.

References / tools to document during actual work

ChatGPT; Leonardo AI; Ideogram; Canva; Google Search; official trademark-search resources relevant to the intended country. Record the exact pages, tool versions, or dates used. Do not list a source as checked unless you actually checked it.
